to Seed, to Agriculture,
to FUTURE...

With anatolia's grain
and craftsmanship,

our adventure begins

Taking its inspiration from the agricultural heritage of Mesopotamia, Özmen Un continues to support its mission of producing healthy and delicious flour as an Anatolian brand with its investments in technology. The search for flavor, which begins with the story of the blonde brides carried in the memory of a wheat grain, ends in skillful hands.

For Özmen Un, who trusts Anatolia, the agricultural industry and craftsmanship, producing the flour of the future is a sign of respect and gratitude to the fertile lands of Anatolia.

Özmen Un supports fair sharing in food by making the necessary investments for sustainable food and agriculture.

Believing in local and local labor, Özmen Un continues to contribute to the Anatolian agriculture and food industry by making innovative investments in the industry with its experience of half a century and advanced technology. Following in the footsteps of the geographic mark, Özmen Un, a supporter of local and registered seeds, pioneers contracted agricultural activities with licensed warehousing.

SECRET OF THE SEED

Root, origin, trace, future...

Özmen Un, who follows the secret of the seed, follows the traces of the grain with the power and excitement it takes from its roots, and produces the flour of the future with the legacy of the seeds entrusted to the soil and raw materials for the food of the future from the inspiration of the trace. It offers decades of experience to the hands that turn grain into flour in the noble and ancient lands where the seed yields a thousand.

Özmen Un catalog has been prepared as a result of a long-lasting feverish work just like our flours in order to share with you the grain and craftsmanship heritage of Anatolia. Are you ready to be a guest with a tale and hit the road after the seed?

We hit the road by taking the legacy of grain and craftsmanship with us.

Our greatest inspiration in our history, which has passed half a century, is the craftsmanship of Mesopotamia that has taken the traces of grains and handmark of dozens of different civilizations.

Following this craftsmanship, we wandered across Anatolia, kneaded dough, listened to legends and accumulated new memories. We have decided to share all the insatiable travels that lasted for months in our catalog. This catalog you are holding in your hand contains the magical journey of a wheat grain from seed to the table, and the richness of Anatolia's flavor.

From the customs cooked
in the kitchen of history

seeding of the future

Since our establishment, we have met with the stories of craftsmen, following the traditions that have been cooked in the kitchen of history. Our aim is to carry the products from these lands into the future with the taste of the first day. For this, we combined craftsmanship and engineering, transformed our precious grains into flour with Industry 4.0 Technology and cleaned every particle with a piling system and laser. Knowing the value of every flavor that seeds, soil and rain add to a grain of wheat, we strive to bring them to the table. With our investments in technology, our biggest goal is to produce flour suitable for food safety without losing the miraculous nutritional values of the grain and preserving its aroma.

In Mesopotamia, where life and wheat production first started, the sun reflects on the soil differently. Because; the genetics of the wheat are mixed with the soil here. Thousands of years of winds whisper in Çukurova in the spring, the April rains grow the wheat, and the summer sun gives life to the seed. In our journey of half a century; The grain and craftsmanship heritage of Anatolia continues to inspire our products, investments and dreams.

With the world's most advanced food safety system, piling system and laser cleaning, grains are prepared for professional kitchens by clearing all external factors.

Our most important
job is to produce
SAFE FOOD

Our aim is to transfer the thousands of years of genetic heritage of the seed to flour and product within the framework of food safety.

ENGINEERING
that turns grain into flour
and flour into taste

on every table

Bread of the Future

We produce flour for the future of the world with the seeds of the lands in which we take root. Healthy, high fiber, low glycemic index and protein-enriched flours will bring health to the tables not only in today's but also in the world of the future.

Agriculture, Future of the World

Self-sufficiency in agriculture is one of the basic responsibilities of societies as well as countries, and all stakeholders of the sector highly share their duties to become the world leader in agriculture. Supporting Anatolian agriculture can be made possible by designing the future of agriculture. Knowing what a strategic area agriculture is in the future of the world, Özmen Un travels across the Anatolian lands and produces customized flours suitable for food safety with its rich seed variety.

Investment into the future of agriculture and food with Industry 4.0

All wheat varieties that add flavor to flour with the contracted agriculture model and licensed warehousing infrastructure made all over Anatolia are carefully selected by our experts and transported to our mill. The dream of the dark mill grain is the unique structures where flour is transformed into art. Flours produced without human touch with Industry 4.0 Technology provide an enormous touch that will carry Anatolia's unique grain heritage to the future.

06

Half a century of experience

The future is possible with products made with healthier and protein-enriched flour. Undoubtedly, as water resources are depleted, agricultural production is becoming more challenging and requiring expertise day by day. Özmen Un experts, who witnessed every stage of the journey from seed to the arrival of the grain to the table, invest in the future of the sector and support local farmers with contracted agricultural projects for healthier and more delicious products. Flours that will make a difference in the world food industry are in the local varieties of Anatolia.

Unique touches made with barley, millet, oats and dozens of different grains turn flour into a health-friendly raw material. The limits of the flavors to be made with healthy flours are as endless as your dreams. Bread, the rising star of gastronomy, turns into diamond in master hands.

Flour Mill of The Future With Dark Mill

We are reaffirming our belief on the future of Turkey by producing flour to our craftsmen who will turn flour into precious jewels.

Our Inspiration is the legacy of craftsmanship and,

OUR DIRECTION IS ANATOLIA

Anatolia is the world's agricultural center. Thousands of years ago, agriculture was carried out for the first time in the world in Diyarbakır Karacadağ and Urfa Göbeklitepe. Seeds steeped in the shadow of craftsmanship for thousands of years now make a difference by being milled with Industry 4.0 Technology for the world's tables. There is a handprint and memory of Anatolian civilizations in every grain of grain that is milled.

We walked across Anatolia through the eyes of grain and traces of craftsmen. We became wheat grains in the water channels of the Urartians; we turned green, the Sumerians became our light; We kneaded thousands of dough, we met Assyrians in bakeries, we hugged cotton in the mound of minstrels, we witnessed the miracle of salvation with a slice of bread in the War of Independence. Before us, we dreamed after every trace that touched the bread, and offered our gratitude. In the struggle for liberation in Gaziantep, we contributed to the bread, turned the poison into ointment for our wounds, we saw the victory. Wheat, which was the hope of the world thousands of years ago on the wing of the Virgo bird, continues to be our guide today. With the seeds in our hands and the dream to come in our hearts, we took the smell of the soil on our back and met Anatolia.

In Kastamonu, we took a breath in the hopeful story of the world with a seed. We planted einkorn seeds for the future of gastronomy. We got into sweet dreams with the curved plum on a slice of einkorn. We returned to the day with Kastamonu's famous pastrami.

In Kars, We wrote poems to Kavlıca, we accompanied cheese and bread in Boğa Tepe. We took warm creams from sheeps, lambs and brand new, side by side sheep pens. One evening in the wide streets of Kars, we listened to the story of Kavlıca, who traveled the world starting from Kars, from century-old grandmothers.

In Vakfıkebir, we hit the road again with a piece of bread in our hands with harvest in our minds after Vakfıkebir Bread, which was cooked with a lot of difficulty. We kneaded dough in Vakfıkebir, whose reputation exceeds the world. From Master Artin to Master Ahmet, we listened to the heroes of the expatriate cake that migrated from Crimea after sourdough.

In Konya, we commemorated Rumi and arrived at night. We offered our gratitude to the rising sun, the pouring rain and the flying bird every morning, and celebrated the harvest. The harvested farmers welcome the seeds they entrust to the land with love and gratitude, just as the day comes in the morning. The harvest festival is the reward of the year in Anatolia. The women who collect the seeds that pile on the agony in Konya's plain lands eagerly to the future. Weddings and associations are established throughout the Anatolian steppes. Seeds placed in dowry chests are the most valuable legacy of the bride. If there is a seed, there is life in Anatolia. On such a day, we celebrated the harvest in Konya. Bulgur boilers were removed, the tandoori burned, the dough was kneaded, the dough came alive with the fire of the sun touching the skin. The dough, which started to bake as it burned and turned into bread as it was cooked, ended with the stories of those who had a propeller on fire. The slices of bread smelling like cereal that we took into our hands turned into Halil İbrahim's table where those who parted their bread met for the sake of salt bread at the Sufism table. Anatolia shares every piece of its bread, sometimes addition to Ezine cheese and sometimes accompanies the olive that comes from Ida.

In Ege, we went from light like a feather to clear like water, we took out boyozes from the oven, and the smoke of the Aegean. We caught chickpea yeast in Torbalı, we remembered our Cretan immigrant masters in the memories of ash yeast. We listened to the story of flowers and migration from Nuran from Germiyan. On a May morning we got up early and gathered the dew of the night, we picked yeast from the leaves, for the bread of the future. We fermented our story and our adventure.

Anatolia's seeds, soil and yeast have been our inspiration. As we fermented tradition, it became our dream that we would come before common era. We added our own handprint to the story of the seed that started in the 12th millennium BC and carried it to today. We shined with the light of mastery and transformed the seed into flour and the grain into flavor with the health of the grain growing in the bosom of the earth.

The magical story of grain has healed our flour, and your tables. Now, how about going on the road after this miraculous journey and secret?

With the seed's existence,
THE LIFE EXISTS!

WHEAT AND LIFE

Tapduk Emre says; “You conquer a country with a spear, and you can settle down with wheat, son.

We have processed everything in Anatolia to our flour in order to share the struggle of the people of Anatolia, the unique flavor layers that Anatolian civilizations added to the dough. The countries that are strong in agriculture, which have been holding agricultural production from past to present, have always survived and carried their culture to the future. In this sense, wheat means the future for Anatolia. With this awareness and mission, Özmen Un fermented Anatolia with the word “yeast” that our ancestors brought from Central Asia and turned wheat into sustenance.

Believing

Özmen Un is an ambassador who carries the soil to the plate with the belief that the soil will protect the seed, the raindrop will grow it and the sun will nourish it. Because it knows that; No craftsman can feed a seed that cannot be fed by the soil. Its investment in technology comes from the respect for craftsmanship and its belief in the future.

The dough is kneaded gently, without tiring or battering it. There is neither more nor less salt and water, everything should be in the right consistency. The true craftsman doesn't hold the secret, is after the secret. As the dough is cooked, it changes shape in mastery and becomes craftsmanship.

Secret of the Wheat

The Wise People says; The secret of wheat is in the belly of Elif, if you say what is the secret of the belly, that is where everything had started where God said “kūn” meaning “be”. As Özmen Un, we bring you together with the story of that miraculous meeting where the seed meets the soil, and what the soil and rain add to the grain. Özmen Un's flavor collection takes its secret from elif's belly of wheat and its skill from the skilful hands of craftsmen.

Tables set up all over the world, meet Özmen Un's flavor collection with taste and pleasure. With the exports we make to many countries of the world, we bring the Anatolian grain heritage together with different cultures and bring the taste of 12 thousand years to the tables.

Series of Craftsmanship

- for Baklava
- for Dessert
- for Kadayıf

- for Tulumba - for Lokma
- for Semolina

THERE IS LOVE IN ITS YEAST

The yeast of the craftsmen is, their good manner.

The dream of baklava masters; a rustle of only them, an aroma that will not be erased from the palate for centuries ...

Özmen Un prepares the **“golden ratio”** of each baklava master in order to realize their dream.

Personal flour is created from scratch for the masters who share the flour mixture they want. In this way, unique flours for baklava, each slice of which has your own flavor, come out. The design of the dough that will provide the most appropriate combination with pistachio, walnut and plain oil is taken from the inspiration in craftsmanship and perfect harmony.

Our inspiration is on the handprint of the craftsmen...

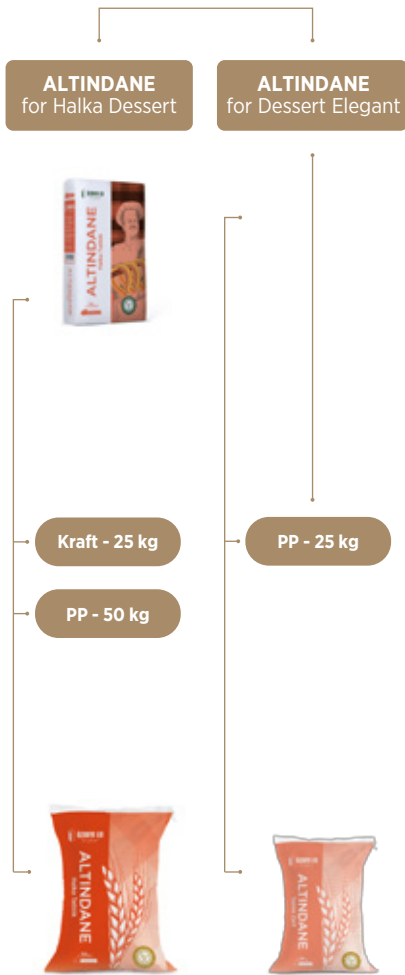

If you set out on a spring journey in Anatolia, the smells of creamy muffin waiting in a secluded area greet you first. Spring, which turns the winter that is longing for the yellowest sun, into summer, welcomes your morning with the sprouts of the seed longing for the earth. The road will take you to Gaziantep, the land of baklava masters who have turned dough into wafer and flour into art for hundreds of years.

It witnesses the master hands of history with its coppersmiths, Zeugma, mosques, inns and baths. Kneading dough takes patience and endurance, mastery turns the dough into wafer with a silky touch by knowing the secret. At the stop of the Silk Road for thousands of years, the artisans mingle the peanuts and sherbet into the dough while whispering the secret of life in every slice's rustle. With the sounds coming from Bakırcılar Bazaar, the end of a slice takes you to Baklavacılar Bazaar, where thousands of years of craftsmanship came from. The days, minutes, hands touching the dough with the masters are the inspiration of our craftsmanship series.

A seed carries thousands of years of genetic heritage of its species into the future. The craftsman's incumbent is; to protect this heritage and treat it like a diamond. But it is not easy to master. It takes effort and patience. Craftsman's yeast; is his goodwill.

"The Wise People say that; Apprenticeship is a period of ignorance and indifference, it requires patience and is difficult. Journeymen requires power, it takes effort to bring knowledge and consciousness together. However, mastery is like captain sailing in cool waters. But there is wisdom that cannot be beaten by its taste. It is called craftsmanship and turns the dough that it kneaded blindly to the fire."

Knowing the value of this wisdom, as Özmen Un, we dedicate this craftsmanship series to them. With respect and reverence to all craftsmen from past to future.

ANTEP UNU | for baklava

Antep Flour 50%	Özmen Special 25%	Super Hışır 25%
-----------------	-------------------	-----------------

Our craftsmen asked us for a new baklava flour that would break the routine. Our R&D unit has developed such a different flour for our masters that; It comes out of the oven early, its pistachio is green, its oil sign smells beautiful, it rustles while it disperses on the palate and keeps its freshness for a long time. It is up to you to create the baklava you want with Antep flour by adding the engineering of Özmen flour to baklava, the dessert of the palaces. If you want, you can reflect your craftsmanship to baklava slices by making mixtures with 100% Pistachio Flour or with our Super Hışır or Özmen Special flours.

ZİVAGO | for baklava

Zivago %100

A brand new baklava flour from Özmen Un. After the world's most perfect baklava flours such as Özmen Özel, Super Hışır, Zeugma, Antep Flour, it is now a flour that you can easily roll your dough under in any dry-humid conditions, and you can protect your baklavas with high quality in any environment. Why is Zivago so ambitious? Because Zivago; We produce with the blend of wheat we harvest from ancestral seed varieties with contracted sowing in the ancient plains of Harran, Göbeklitepe, Barak, Yavuzeli, where the sun reflects differently. By adding Özmen flour engineering and Industry 4.0 technology to our wheat, which we harvest with the taste of our farmers' sweat and sun, we protect the Anatolian agricultural heritage and thousands of years of taste memory. We present Zivago, our new baklava flour that breaks the rules, to you, our artisans. Please do not mix this unique flour with another flour.

SÜPER HIŞIR | for baklava

Super Hışır 50%	Özmen Special 25%	Antep Flour 25%
-----------------	-------------------	-----------------

Süper Hışır, which is produced from our wheat that come to life with the sun of Mesopotamia, gets its inspiration from the amazing “crust” sound which is heard in every bite of a baklava. Thanks to the elasticity of the dough, light wafer like tulle and strong like iron are rolled out. Mastery is to preserve the unique flavors that are scattered on every layer and to bring them together with sherbet. With Super Hışır, you can either create the main body of your baklava or create a special baklava that you knead completely with it. New generation baklavas which crumble in palates and whose smell will stay in the people’s memory for hundreds of years with Super Hışır, are the favourite of the craftsmen.

THE SECRET OF THE WORK IS IN THE MASTERY!

It's not about being a bread master, it's about being a master of one's own life ...

Those who allow dough to knead a person become masters, not those who knead the dough. It is the one who can pass the trace of mastery to the product. Özmen Un appreciates the master touches that turn flour into pleasure with the products inspired by the masters at every moment of life. Entrusting the seed to the soil, grinding the wheat expertly in the mill, being the master of the oven and working skillfully in the pastry shop are all processes that require hard work. Every work started with patience and calmness reflects the handprint of the master, his strong stance to life. Regardless of what they do, Özmen Un approaches everyone who skillfully does their job with respect and excitement. Every flour produced for them tells the story of turning the grain into jewelry by carefully grinding it. Mastery Series; It consists of the most valuable pieces of our collection dedicated to those who do their work with excitement and enthusiasm.

BELKIS | for baklava börek

The traditional food culture of Anatolia continues to inspire our products. Kol böreği and Kürt böreği are unique flavors that bring the taste of the past to the future and are the ancestor of the puff börek dough for thousands of years. Kürt and Kol böreği; It is a unique type of pastry made with dough meringues kneaded with flour, water and salt, followed by a special oil. The flavor of the pastry depends on the mastery and the strength of the strong dough obtained from our Belkis flour. The dough, which is divided into meringues, is kept for a certain time and then rolled thinly like a tulle in the hands of craftsmen. The power of the blown dough is hidden in the fingers of the masters, in the elasticity of our Belkis flour. When the strong dough is cooked, it gives taste lovers and gourmets a wonderful eating experience with a silky fluidity and crunch. Baking color, heat resistance of the dough, swelling, pulling the oil correctly, and all of these will be a tradition of thousands of years passed on by our Belkis flour and our masters to the future.

UNIYA | for manti

The indispensable taste of our traditional cuisine, our manti flour, which is easy to roll and resistant to breaking, gives a feast of taste when it meets the taste of minced meat. Our Uniya Mantlık flour offers satisfactory performance both in the fingers of craftsmen and in production with machinery. Uniya Mantlık is the strong flour produced for the art of manti that adds flavor to the traditional dishes of Kayseri and is engraved in memories.

The most delicious manti on palates is now turning into the handprint of professional kitchens with Uniya Mantlık flour. The only choice of masters with its flavor and strength structure... A century-old tradition where you can see all the reflections of patience adds to mastery in one spoon. The moment when a spoon turns into a great taste at the table where tradition meets the future, the manti tradition of Anatolia is on the world tables with Uniya Mantlık.

UNIYA | for machine wafer

While Anatolian bakery inspired the European continent thousands of years ago, Cappadocian bakers started pastry in Italy. As in the past, wafer, which is a Central Asian tradition, is opened to the world market by being produced in machines. For the machine dough, the dough obtained from our Uniya Wafer Flour; It is rolled with a stretching system and turns into thin doughs. The strength of the wafer, the durability of the machine and the taste story of the wafer make it unique. The long shelf life and the fact that it is not broken, separates it from other wafers in the flavor journey that it will come out with packaging. The higher the dough's water absorption, the higher the performance that the producer expects from flour. Özmen engineering carries the high quality you can obtain from Uniya machine Wafer Flour to your wafer, as in all our products.

UNIYA | for lux wafer

Flour produced for each flavor requires different engineering and mastery. Rolling the dough with a rolling pin, rolling it with a machine (trako), both forms of production are important from each other in order to keep Anatolian flavors alive and carry them into the future. In the standard dough rolling, starch is used to prevent the dough from sticking. However, some traditional masters use flours instead of starch. Structural features of dough used for occupation are different. The easy opening of the dough used for the cereal, not breaking up affects the quality of the wafer. The wafers are often cooked on a traditional sheet metal. Its resistance to sheet heat and short cooking time add flavor to its taste. The brightness of the wafer changes depending on the water absorption of the dough during irrigation. While the journey of flavor, which begins by packaging without breaking, ends on new tables, each wafer creates a new flavor story. Our Uniya Luxurious Pastry Flour is for you, our artisan craftsmen who have devoted their lives to wafer making...

GEREK | uğralık

Each bakery product is a masterpiece of taste that emerged as a result of the gradual mastery of the tradition of thousands of years. Each master adds their own handprint to the product, while some touches make the food unique. Each dough creates unique taste experiences reflected on the palate in terms of both kneading and flour properties. Different mastership schools use a type of flour called isthmus instead of starch to roll dough. The use of occupation, which is a very old tradition, continues to increase. Özmen Flour, Both the granules of our occupational flour are very fine. These fine particles provide shine and a different flavor layer to the dough. The flour should remain on the dough in a sufficient amount, protecting it without sticking to the dough. It takes true engineering and product knowledge to pursue. While the flour on the dough allows the dough to roll easily, it also allows it to remain soft. The meeting of Özmen Flour Both Uğralık (Flour) and Uniya Luxury Pastry Flour reveals the layers of taste reflected on the palate.

WITH RESPECT AND GRATITUDE TO ANATOLIAN BAKERY!

The smell of sourdough has already hit the road...

We process the most special and most valuable local wheat of Anatolia in our dark mill so that the delicious smell of bread coming out of the oven can wrap around the table, and cheer the palates with the delicious crispy breads. We know that bakeries are changing, bakers are changing, breads are re-kneaded with sourdough in factories. We best understand the burdens of time on the masters and the breadwinner of bakers. Neighborhood bakeries come to life again, beautiful dreams are made in centuries-old bakeries. Apprentices start to work, journeymen are very enthusiastic about being masters in a short time. The hurry of the masters is for the better and the more beautiful.

**As Özmen Un, we produce flour that
will carry the tradition of bakeries
and the dreams of apprentices into
the future, and bring the bakeries
together with the neighborhood.**

Special flours for wood fire, rotary oven, base oven and all different ovens have been produced for you. With our respect and gratitude to Anatolian bakery ...

DARIEL | for pita

A good kebab emerges when a beautiful meat meets a soft nailed pita. Kneading hoofed pita dough requires skill and patience. Neither more nor less. Sometimes the nailed pita adds flavor to the meat, and sometimes it nourishes the yogurt. Wherever it is, it should be sometimes crispy and sometimes soft. The softness of the pita bread, the extraordinary swelling of the cuban bread, the elastic structure of the gobit bread, all these features are possible with Dariel Pita Flour. Dariel Pidelik Flour, inspired by Anatolian local flavors, is a durable, aromatic flour with high water-buoyancy.

DARIEL | for pita extra

Some masters prepare some products for the best. Mastery means not being content with less, more swollen cuban bread requires gobit bread that never stale. Stronger, more elastic, more durable products can be made with Dariel Pita Bread Extra Flour, which is produced for special palates who want pita in summer and winter. Wheat, which reveals all its aromas in the fire, and its elasticity that does not lose its strength as it grows longer is all its trademark.

DARIEL | ramadan pita

Not only in Ramadan, but throughout the year, the flavors created with pita flour specially prepared for those who want to enjoy pita are produced in reference to the history of pita. Artisanal pita flour with high water buoyancy, strong elasticity, resistant to heat caused by kneading. Pitas with a mixture of durum wheat, with plenty of pores and moisture content, are heat-resistant either in wood fire, in the base oven or in the rotary oven. The blessings of Ramadan are on our tables with Dariel Ramadan Pita flour.

FLAMURA | for french bread

The happiness of starting the day with a warm bread and the feeling of confidence created by a loaf of bread brought home in the evening are priceless. We produced our Flamura French Flour, which offers high performance in all ovens, crunchy crust, plenty of pores and moisture inside, so that masterful fragrant breads are made.

FLAMURA | for artisan french bread

Some masters want to crown their craftsmanship with wood fire. For them, the place where loaves of bread come to life is the stone-based black oven. The dough sleeps, wakes up, dreams, and eventually turns into bread. Dough that is propeller to fire must be durable, brave and resistant to heat. Here, Flamura Artizan is a type of flour specially prepared for craftsmen who are dedicated to French-Bread craftsmanship.

BEZOSTA | for lavaş

Kebab sails to other worlds in a wrap. While a good meat feels good in a good thin bread, the unbearable aroma that meat gives to bread creates a taste that makes your palates feel magnificent. Sometimes it hosts garnishes of various cultures. Anatolian tastes, each more precious than the other, praise mastery on thin bread.

MOZAİK 2 | for pita tandoori

Tandoori breads occupy a special place in the historical bakeries of Anatolia, which contain centuries-old flavors. Their regulars do not change their tandoori bread for anything with its slightly broken color and soft structure.

Özmen Flour, which you can use when making both tandoori bread and pita bread, is a product of advanced engineering, Mozaik 2 Pita - Tandoori Flour is prepared with Anatolian wheat. Pita Bread - Tandoori flour, with its strong structure and strength suitable for every oven; It brings the local richness of Anatolian pita to modern tables. Konya's meat bread, fat loaf, Tire's döner pita, the future of the Black Sea pita tradition on modern tables.

TOZLUK

Centuries-old bakers, who have the mastery of hundreds of years in handprint, embrace innovation as much as they depend on their habits. The fine bran, which is used in the shoveling of all kinds of local and international bread types such as Ramadan pita, French baguette, Ciabatta, flower bread, may not be desired by the end consumers. Produced with advanced technology, Tozluk protects dough from high fire when used under bread types. At the same time, tozluk, which adds an extraordinary flavor to the bread, has a level of thinness which is edible. Small pieces of lahmacun and pita, which are cooked in a short time, between the dough and the stone base provide a miraculous taste. Used for many traditional flavors such as closed pita, open pita, country pita, Tozluk is now at work in professional kitchens. Produced with advanced technology, the Leggings appeal to those who want to bake the bread of the future...

İRMİK ALTI

İrmik Altı 30%	Esmer for Kadayıf 30%	Diyarbakır Burma for Kadayıf 30%	Machine for Kadayıf 10%
----------------	-----------------------	----------------------------------	-------------------------

The secret of İrmik Altı is wheat shells called fine bran. The flavor of wheat takes products to another level. The mystery of a good lahmacun is hidden in the fine wheat particles coming from the crunchy dough. Small pieces of lahmacun and pita cooked in a short time between the dough and the stone base provide a miraculous taste. Prepared for many traditional flavors such as closed pita, open pita, pita bread, İrmik Altı Flour is now at work in professional kitchens. You can get unique tastes by adding some İrmik Altı Flour to the dough of Diyarbakır burma and halka dessert.

FOR THE ONES THAT KNOW THE VALUE OF BREAD AND BUTTER

We know what one's bread and butter is, and with this awareness, we produce flour that will add value to the industry and craftsmanship.

Neighborhoods are transforming, the footsteps of the new generation masters are heard in the bakeries. Turkey is expanding its Anatolian bread brand with its own grains.

As Özmen Un, we create value for the future of bakeries with our investments in technology. Bakeries are now designing flavors that will go down in history with their own stories, strong and confident.

The historical bakeries, where the street, the neighborhood and memories digest, now bake the bread of the future. The fire turns the dough into bread.

Personalized Flours Exclusive to The Brand

Inimitable flavors for bakery brands that want to create the brands of the future will undoubtedly increase their competitive power in the market.

Özmen Un enables you to make products with the taste and aroma values you want with flour alternatives special for you only. Flavors that make the palate feel amazing with flour alternatives with high protein value, enriched with folic acid, energy values special to you, in all the particles of flour. Every craftsman wants to see his own fingerprint on his work. The difference of the flavors to be created expertly can be provided by carrying your trace of life. Özmen Un perceives the flavor of your fingerprint to the product as the most valuable decoration of the world. Personalized flours carry the traces of your brand, craftsmanship and dream to your tables.

For the taste of your dreams, let's produce special flours for your brand together and bring out inimitable flavors.

THE AWARD OF THE MASTERY IS, HANDPRINT...

PERSONALIZED FLOURS EXCLUSIVE TO THE BRAND

"TASTE DESIGN"

The special sensations of what we eat are designed with advanced technology.

The only thing you need to do is taste design for foods designed with grains suitable for changing climatic conditions that will carry your brand to an unrivaled place. It is now very easy to create centuries-old flavors specific to your brand such as Vakfıkebir bread, gum mastic cookies and Maraş kete. Whether you are a local bakery or run an international bakery, producing unique products made with healthy raw materials in the future of food will be our biggest challenge.

In the next decade, agricultural products will be enriched in protein and vitamins, thanks to genetics and biomolecular science. The shape of the plate, the crunch of the bread, the sound of the baklava, the hum in the background are all factors that affect the taste and pleasure of what we eat. The story of the food often brings us together with our childhood memories.

The flavor ingredients of the future, the perception of food, and the concept of health are undoubtedly possible with a strong food industry. Refined reality, aromatic sounds, controlled lighting tricks will all be part of the nutritional perception of the future. While consuming food made with grains, the image of Göbeklitepe flowing in the background undoubtedly conveys the fact that it is a part of ancient kitchens to the brain and also directs the taste receptors. Robotics masters, 3D printed design cakes will bring success to those who invest in the food industry of the future.

In a period when technology is developing this much, it is possible to create special flavors only with strong suppliers. Modern man has taken very enthusiastic steps to carry the taste memory of the last thousand years into the future. In the coming years, we will discover new flavors we never knew.

Turning flour into art is in your hands...
